The Connection Plug&Play cables for dsp amplifiers ensure maximum ease of installation according to the "OEM Integrator" philosophy. For this purpose, cables with Plug&Play connections and foolproof have been built using the same materials employed to build the OEM wiring.

The solutions which Audison offers are: CN T-Harness compatible with CN Extension Cables, and custom T-Harness for special cars.

Thanks to these cable families, all Audison Dsp amplifiers can be installed on a large number of vehicles with drastically reduced working time, and without the need to modify the factory wiring.

All cables have appropriate gauge size and are twisted to ensure maximum shielding effectiveness along the entire input/output line.

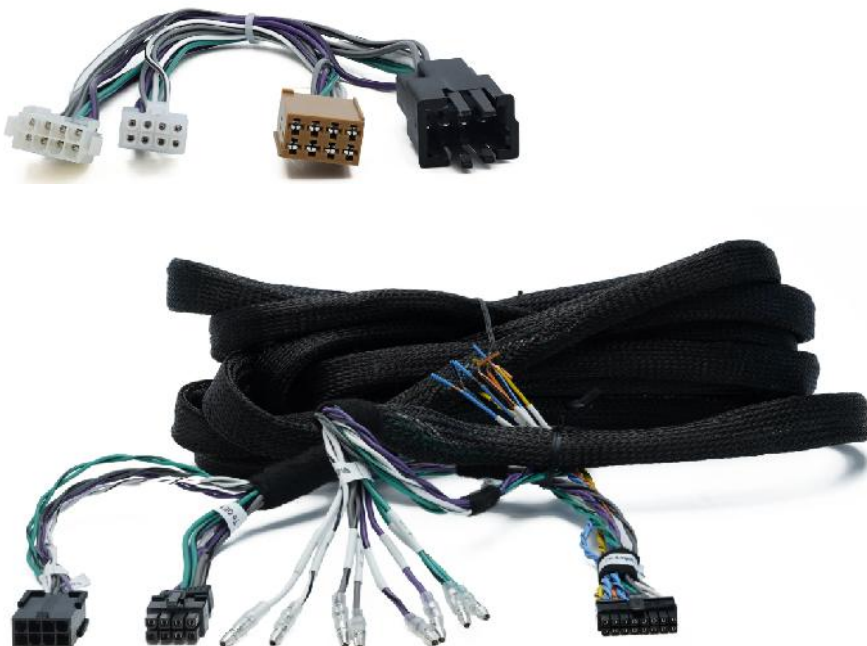

These are the key features:

1. Built with **twisted cables**, for effective elimination of disturbances
2. **Three different length options** for CN ISO extensions (1,6 mt, 2,6 mt and 5,6 mt) and **Two different length options** for CN MX extensions (2,6 mt and 5,6 mt).
3. **Cut-proof protective shield.**
4. **In/Out double connector**, to also receive the amplified signal of the Dsp amplifiers.
5. **No soldering required.**

CN MX - T-Harness and Extension cables with Molex connector

The CN MX T-harness cables are equipped with Molex connector to send the OEM factory audio signal to the aftermarket amplifier input.

The CN MX extensions are equipped with a matching Molex connector, to pair effortlessly to each CN MX T-harness.
